

**ONLY THE DB-25 OR RIBBON CABLE SHOULD BE USED!!
DO NOT USE BOTH AT THE SAME TIME!**

This card include bus transceiver logic to allow a Raspberry Pi to connect to a vintage Macintosh SCSI port. (It may work with other systems as well)

This design is based upon GIMONS's Target/Initiator design <http://retropc.net/gimons/rascsi/>

This is the "FULLSPEC" version of the board that can work as a SCSI target OR initiator

Thank you to everyone who has worked on this project!!
