## DOS 3.3.5

by Rick Sutcliffe

### **COPYRIGHT:**

DOS 3.3.5 is Copyright 1987 by Arjay Enterprises.

This system patcher was written by Rick Sutcliffe of Arjay Enterprises.

This 2018 release is produced by Apple Pugetsound Program Library Exchange (A.P.P.L.E.) with permission from the author.

This disk and the programs contained herein, are provided as-is without any warranty made or implied and should be used at your own risk.

### **DESCRIPTION:**

This DOS will allow you to read and write files using 3.5 inch drives on your Apple IIGs. It will not work on other Apple II's because it requires the 65816 processor.

DOS 3.3.5 can also initialize a bootable 3.5 inch disk with the normal command. It will not initialize a 5.25 inch floppy, but will read and write them.

When initializing a 3.5 inch floppy disk, 3.5 inch drive #1 is designated S5,D1 for the first 400K and S5,D2 for the next 400K. You continue in this way for as many 3.5 inch drives as you have. The RAM drive can also be initialized only if it has at least 400K.

### **USAGE:**

This disk has no DOS. To make a version of FID that will work properly, you type EXECFID335MAKER and follow the instructions.

The boot option for DOS335PATCH will attempt to boot a DOS3.5 disk in S5,D1 and modify the DOS on the fly. This may allow some commercial software to work, but there are no guarantees.

This program is supposed to be transparent. The less documentation to confuse things the better.
